

*Bringing People and Technology Together  
... To Provide Solutions*

**JOB TITLE:** Senior SQL Server Database Engineer

**Contract Position** – 6 Months (Possible Extension)

**Location:** Seattle, WA Area

**RATE:** \$69.00 W-2 Hourly (Inclusive of all expenses)

**START DATE:** ASAP

Essential Job Functions:

- Acts as lead person who provides specialized database expertise and guidance, with emphasis on database design for logical and physical models, and development or monitoring of activities for teams and/or vendors involving enterprise data solutions
- Designs, documents, and implements solutions supporting complex business processes as part of a comprehensive team delivering solutions that are secure, high-performing, highly-available, and resilient
- Utilizes in-depth business and technical knowledge in consultation with management and suppliers on technical issues.
- Performs impact analysis of application changes across various components; holding an end-to-end view of the system
- Develops and tests database and data security designs
- Supports the implementation activities, troubleshooting environmental issues, and transition for production support as required.
- Performs other duties as assigned.

Education Requirements:

Four year college degree, preferably in Information Technology, Business, or Computer Science. Continue educational development in job related field.

Experience Requirements:

- Work with data models to generate the design for databases, tables, and data management processes including storage design, table design, index design, disaster recovery, and backup.
- Database warehousing & analytics design and implementation experience
- Integrated data from multiple platforms and third-party applications
- Cleansing and analyzing large relational and unstructured data sets
- Experience working in multiple development methodologies (waterfall, agile)
